:))

It's nice having the two fucky ones helping each others
at lies and swindlings.

:))

Betov.

<<http://betov.free.fr/RosAsm.html>>

PS.

For the ones who would like to make a good idea about how
to get a fast and efficient Symbols Managements, RosAsm
Checksum64 and associated Routines and Tables are in the
Source. They are easy to find out and very easy to read.

They are, also, the Routines and Tables that made RosAsm
the fastest of the actual Assembler (not considering MASM,
of course, that has always been the slowest and the worst
available choice, but considering the valid and serious
competitors: FASM and GoAsm).
