Some people are neither. Some people fall in love with a `_person_`. You do not need a "person" to have sexuality. But imo, you need a "person" to have a meaningful relationship. If I had compaints about anything, it would be that it seems that so few has the inner strength to become a person. As it seems to me "everyone" is looking to others for examples of how to think, live and act, whereas as you cannot find anything true about yourself or the world outside without going within and take a look there instead. The reason I posted that dream (not fantasy, I was unconscious at the time) is that all my life I like to try to shook rigid people. Each time I am hoping for a real honest answer. Something true and authentic. But mostly I get disappointed, and are fed the things I knew allready would show up, based on my estimate of the persons abilities. Lines. Platitudes. Meaninglessnesses. After a while it gets pretty boring.

You should start practicing beeing autentic. A man that is not autentic in 70 years will be replaced by a roboto. Our only real assets as humans, are our `_human_` unique qualities. Our feelings, imaginations and fantasies. Our stories. The part of us that reaches into and borders the not yet realized ideas. Listen to me. Intelligence has a METHOD. It can be emulated. This is conseptually easy. Enough so that its actually forming

this very minute. And when the powers of the CPU can compete with humans intelligence, everything comming from this intelligence will be redundant. 32 years afterwards, a single CPU can outsmart the entire population on the whole of the earth. Insane ? Do the math! If we make a pretty dark assumption that they get will still be able to double their capabilities each 18 months. (This will hopefully not hold, though), then pure intelligence will become nothing but a useless redundancy. This is selfevident. So will manual labour, and all things that needs works and intelligence/logic only.

Computers will even be able to create poems when they will have the ability to live as a human beeing, and to make the experiences a human can. Because poems are derived from experiences. They are play with words and thoughts over some personal experience. Pain can be emulated. Restrictions as well. Moral also. And the part of love they call love these days, in tv and media, can also clearly be emulated, and looks can be emulated. If theres not something "divine" over it, some unknown, not realizeable unknown factor there, some things that just cannot be emulated, computers will create books, poetry and excellent intellectual works in next to no time after they have incorporated each small pattern matching ability we have into them. And given them a narrow enough set of rules and abilities, they will be even better humans than most of us.

So what will be our contribution then ?

(oh gawwd I'm so crazy)
