I tried messing around with the line of code that you suggested but now the programs just hangs.

Can anyone help me fix up this code. I really need to find a working example of LBA_Read_Sector or I would prefer even more to just make this block of code work correctly. I'm not really an assembly expert.

I just happened to update an old disk erasure program yesterday, it is written in Turbo Pascal with inline asm for all the lowlevel stuff.

If you send me an email, I'll send you the source code.

OK?

Terje
