howdy all,

I am getting back into programming after a long enough absence that the whole landscape has changed. I'm currently working with GCC 3.2.2 and Visual C++ 6.0.

I have a vague memory of a way to define arrays that they do not contain a member array(0), but rather start at 1. Don't even recall what language it is from. Can anyone tell me if there is a way to do this in C++?

Thanks

JP
