I gave you help. You are inconsiderate to ignore that and insult me.

I don't think it is a "cheap shot" to say I'm not a fan of India. I'm not. I don't like that jobs from the USA are going there. The fact is that they are, and the fact is I don't like it. I didn't curse the country, I just said I don't approve. How is that a "cheap shot"? It is my opinion.

My opinion is that I know C better than you. I think you couldn't program C to USA standards at all. But I also feel that you might be hired for a job I could do easily, because you will take less money. I

## Re: How to read arrow key input in the ANSI way?

feel (in my opinion) that I would do a better job for my employer, because I understand the full life-cycle of code – it needs to be changable and easily understood. Someone new to programming, as you are, may get the work because you will work cheap – and you may cheapen programming in general and make it harder for everyone who comes after you.

Nice try, but you can't post so much crap about someone and say "this should end it". If you want to end the conversation, just don't post.

- > How can you say that " since a lot of jobs that I can do are going to
- > guys like you who

- > How do you know that?

You are asking my help, that's how I know that. You can't figure out how to write the simplest of Windows programs in an environment where the OS HANDS you the keystrokes in events... Come on, who do you think you are fooling here. Anyways, I gave you the only good advice you got; you should just get over to a Windows newsgroup. And you really shouldn't even come back here, because you don't write C code and never will. My advice was perfect FOR YOU.

- > posting instead of criticizing. OK?

First: don't ever tell me what to do. I will not do it – to extremity. Really. You have no control over other people and "telling" them is never going to work. So now I have schooled you again, you need to start sending me tuition money... ;-)

For a country that was under English rule for so long, you have a real lack of knowledge about speaking English. That aside, I did not criticize your country, I said I was not a "fanatic supporter" of it, that is what "fan" is short for. Your words: "If you are so clever, it

Re: How to read arrow key input in the ANSI way?

is up to you to find a job." will be echoing in your ears in less than 10 years, my friend. Count on it.

> I feel extremely sorry for this post and this issue. But this is the

You cannot stop the Mabden horde, my friend. They are the new race, created by Chaos to bring down the Elder Races. The horde cometh.

> I wanted to say thank you for your help.

You are welcome.
