```
Sorry, i realized a couple things after I posted this.
[...]
    struct command_pkt *com;
[...]
    memcpy(&buf[0], (unsigned char *)&com, len);
```

ITYM

```
memcpy(&buf[0], com, len);
```

or simply

```
memcpy(buf, com, len);
```

.... and you need to return to your C textbook and make sure you understand the difference between the pointer and the "pointee."
