hai to everybody
I need to know how to connect database ms access or oracle with c or c++?
please if u know tell
I am interested in doing project with c

Standard C does not know what a "database" is, so this is not the right newsgroup to ask in. (Standard C can be used to implement databases, but the methods for doing so would be algorithm questions, which this newsgroup doesn't really deal with either.)

I suggest that you start by reading the documentation provided with your database, and then if you still have questions, ask in a newsgroup appropriate to the database of your choice.

The details of connecting to Oracle via C would take many many pages to write out, so you are advised to read existing material first.
