.... snip ...

One more reason to use the text version of N869.

I don't think that's an accurate comment. The text version is just as capable of having `__ FUNCTION __` as the PDF.

The text version of N869 does not include any spacing in any of the 20 identifiers starting with `__`. There's no reason to assume that if one more were mentioned, that one would.

And you know this for sure, how exactly? Other than by searching for it, I mean. .

Chuck was in my view unreasonably claiming that the PDF was inferior to the text version due to lack of searchability. I merely wanted to point out that this is a false inference.

No, you misinterpret my comment. The point is that PDF searches can only be done by a PDF reader. With text you have a choice, such as `grep`, a text editor, or any other piece of text handling software on your system. So you can suit your search methods to software familiar to you.
