```
int z=0;
```

<snip>

```
z=1;
```

<snip>

```
this is my code, I want to enter like this
3X^1+32X^4+12X^0 but
its
only do if part which if z==0 but why it doesnt do 'else'
part????
```

Because 'z' is always zero. You initialise it to zero but no other code changes it, so the if part of the if/else statement is always executed.

there is a 'z=1;' in there. Proof, if it were needed, that good names and good layout are important. The code is uninviting so I have not had a look at it.

Ah yes. Good spot. However it comes after the if/else construct so it's of no consequence to it.
