Vous êtes très tenace :-) Sacre bleu ! Tout est perdu !

I DELIBERATELY started the thread OT-Cheeses so that we wouldn't get side-tracked by Doc's comments (OT = Off Topic in this Newsgroup) – and then you go following me to that thread !!! :-). So I'm back in your original thread – let's stay here !

Thanks for all your answers

i can't do the mass-mailing using a sub in VBA so i try to do it by an other way

i scan the word document and i replace merge fields by values it works

i'd like to change words or expressions but to do this i have to specify the paragraph

i give you an example of code :

```
move z"Titre" to unevar
```

```
invoke theDocument "getParagraphs" returning theParagraphs
```

```
invoke theParagraphs "item" using by value 1
```

```
returning theParagraph
```

```
invoke theParagraph "getRange" returning theRange
```

```
invoke theParagraph "finalize" returning theParagraph
```

```
invoke theParagraphs "finalize" returning theParagraphs
```

```
invoke theRange "getFind" returning theFind
```

```
invoke theFind "setForward" using by value 1
```

```
invoke theFind "setText" using by content unevar
```

```
invoke theFind "execute"
```

```
invoke theFind "getFound" returning found
```

```
invoke theFind "finalize" returning theFind
```

```
invoke theRange "select"
```

```
invoke theRange "setText" using "second"
```

Re: ouvrir un document word à partir d'un programme cobol

this part of code search the text *"Titre"* in paragraph 1 and replace
it by *second* if *"Titre"* has been find
paragraph 1 is sp
