Thanks Pete.

Yes I use crystl32.ocx.

Can you give an example how to do – methods, properties to use.

Yes, but not for free. Sorry.

Help is one thing and I'm glad to do it. Doing work for free is another.

You have posted no attempts, no sample code, no description of what problems you encountered.

Do you seriously think I will sit down and create a COBOL project to do this from scratch, for nothing?

Unrealistic.

(Apart from anything else, I'm really busy at the moment... :-))

Have a crack at it yourself.

If you really can't make it work, post again (showing what you did and a statement of your problem) or contact me privately.

Pete.
