You must take me for something i just can't amagine ?

I have just cut and pasted your sample
– and as expected it gives a Range Check error on I := 5;
S2[I] := 'A';// Does not generate Range error !

Look Jamie, Rob and I are not making a personal attack, we are simply
stating that Delphi is expected to make a Range Check error when
accessing S[Length(S) + 1]

Also that on our machines it DOES throw an error

KA-PLUNK!

so what your trying to tell me that i have miles of
code that is wrong. bye for now.
