I am trying to track down why Delphi and ADO is having a problem trying to select records.

I am connecting to Sybase database, when I try to perform the following query "Select * from Orders" I get Unspecified error. But if I spell out the columns it works "Select OrderID, OrderDesc, OrderQty from Orders".

Can anybody tell me why and what to do fix the problem.

Also Select * worked at first, but now it craps out.

Thanks,

Chad
