Forgive me guys... This is an elementary question and I should know the answer but I'm feeling rather dyslexic after hunting all over Microsoft's website looking for ADO download and as they say in Iowa.. I'm cornfused.

Is MDAC version 2.8 the product I need to install on customer's machine in order to implement a server app I built for them that accesses an Access database using ADO?

After reading all the terms Microsoft has invented, I usually walk away more confused than I was before reading. Does anyone else have this problem? I think this is a conspiracy heh heh :)

ActiveX Data Objects (ADO)

Microsoft Data Access Components (MDAC)

Data Access Objects (DAO)
