I am using Delphi 7, SQLServer 2000, and ADO

I use the ADODatasets in the application to select, insert, update and delete records. Is the correct place to setup the ADOConnect.BeginTrans, ADOConnect.CommitTrans and ADOConnect.rollback in the onclick event of the save button.

```
procedure TfrmDemographicis.btnSaveClick(Sender: TObject);
var
  Save_Cursor:TCursor;
begin
  Save_Cursor := Screen.Cursor;
  Screen.Cursor := crSQLWait;
  adoConn.BeginTrans;
  try
    adoConn.CommitTrans;
  except
    on Exception do
      begin
        MessageDlg('Exception Message Unable to Update Tables: ',
mtInformation, [mbOK],0);
        raise;
        adoConn.RollbackTrans;
        exit;
      end; //on exception
    end; //try
    Screen.Cursor := Save_Cursor;//
  end;
```

TIA
