*>How do you call that ADO Connection String dialog at runtime? I mean, in a
>TADOConnection, clicking in the ConnectionString property you can bring up a
>dialog. I'm sure this is just the ADO dialog from micorsoft, but I'm not
>sure what call it is to bring that up. Anyone know how to do this?*

PromptDataSource is what you are looking for.

Its an undocumented method so this URL will probably help you
