When you do the search you are probably doing one of two things
You set the filter property of the query to the search condition or you open
the query with a where.

So in your code you have either

```
Qry.filter := 'KeyField='+Edit.text;  
Or  
Qry.Close;  
Qry.Sql.Add('Where KeyField='+Edit.Text);  
Qry.Open;
```

If you use filter then you can do

```
Qry.Filter="";
```

If you use the Sql then you need to do

```
Qry.Close;  
Qry.Sql.Clear;  
Qry.Sql.Add ('Select * from <AccesTableName>');  
Qry.Open;
```

You should look and see what code happen when you click the search button
and maybe post it here so we could give you a better answer.
