Hi All,

i am using SQL Server and Delphi 7 and i have a stored procedure that returns multiple resultsets. When i using TADOStoredProc's NextRecordset method my current recordset was changed. At the end of the NextRecordSet calls my TADOStoredProc object has point a last recordset. Is it possible to point first recordset again ? For example:

my stored procedure looks like following;

```
Create Procedure MyProc
As
Select * from Table_A --first recordset
select * from Table_B --second recordset
select * from Table_C --third recordset
```

and code here..

```
asp : TADOStoredProc;

var
iDummy : Integer;
begin
asp.NextRecordSet(iDummy); // my object has point second recordset now
asp.NextRecordSet(iDummy); // my object has point third recordset now

{
What code must i write here to go back first recordset ???
Is it possible ? I dont want to Close/Open again.
}
end;
```

Sincerely

.
