I have a program that uses TADOConnection, TADOQuery and TDataSource. Upon startup with 2 of my customers both of which run Windows XP SP2, the program encounters an error that will shut the program down this error is "Error Creating Object, Please verify that the Microsoft Data Access Components 2.1 (Or Later) have been properly installed" I know that the SP2 will install MDAC 2.8 and JET 4 which my application relies on. I had my customer run the Component Checker which verified that MDAC 2.8 was installed. Any Ideas on what can be done? I found an Article on Microsofts site regarding MDAC issues

<http://support.microsoft.com/default.aspx?scid=kb;en-us;870630#XSLTH3207>

since the SP2 is already installed you cannot install MDAC and the JET Drivers again but you can run the RUNTIFIX.exe I am not to sure if this will touch my problem.

Thanks!
Jeremy
