If I installed the MAC myself, what would happen if reinstall SQL Server 2000? Will that be replaced by SQL Server 2000's MDAC ?

"Brian Bushay TeamB" <BBushay@xxxxxxxxxx> wrote in message news:2i66a2dtqvjoion8vci0bg2896nm9h78s8@xxxxxxxxxx

That is possible. You are getting into a problem that is really a Microsoft support issue.

However I would first suggest you install the latest version of MDAC like I first suggested.

You might also just type in the name of the server you want to use rather than using the Expert to find it.

Will it be because I installed the SQL Server 2005 Express before installing the SQL Server 2000 ?

"Brian Bushay TeamB" <BBushay@xxxxxxxxxx> wrote in message news:1lh3a2p7807n16oaruev4d13mifqad6j9a@xxxxxxxxxx

I installed SQL Server 2000 Enterprise.
I tried to build connection string of TADOConnection component by using the wizard.

After selecting the provider, click Next to the Connection tab, select the server name by clicking the down arrow, I got the error:

Re: TADOCConnection error – connection string

Error enumerating data servers. Enumerator reports 'Unspecified error'

My guess is you have a corrupt MDAC installation
Try downloading the most recent version of MDAC and installing it.
