Paul Meyer wrote:

Hello NG,

i use ADO 2.8 in my Delphi 5 application to connect to SQL-Server 2000. All works fine, but now i've to support Oracle 9i. The ADO-Connection (.UDL) works, but if i try to connect, my Delphi want "TAutoInc" field, but Oracle give me only float. Delphi want Boolean, but i Oracle give me a float. Every field Oracle gives, is a float. Is this an error into ADO, Oracle or Delphi? Is there short way to solve this problem or do i need to swith to other components <> ADO?

Best regards

IIRC there was an ADO update for D5 because of some bugs I can't remember. If you haven't installed it check the Registered Downloads page.

OTOH, have you checked if you have the latest Oracle OLE DB provider? Note I don't mean MDAC/ADO here but your data provider.
