Hi

Some more thoughts.

It looks like the you want to treat IntToStr32 and IntToStr64 as two challenges, but keep them in one B&V where they only share what is essentially a Template B&V.

The validation code and benchmark code is different? (but looks alike, except for Integer/Int64 and validation ranges. Validation and benchmark functions call functions via function pointers which are different for the two function types. Because of this and the different ranges and parameter and return types, validation and benchmark functions have to come in two versions)

Functions are different and do not have to use each other.

Result files must be separate to be handled by the SpreadsheetCreator.

The WinnersList will contain both challenges in separate collums?

Points are give as the challenges are separate.

Each challenge gets its own spreadsheet?

Do I understand all this correctly?

What about the website? Will you list give them seperate pages and spreadsheets?

Best regards

Dennis Kjaer Christensen
