Hi Dennis,

I think we should have one and only one format for benchmark and validation results meaning that IntToStr and Val B&V's should be changed to follow the format used by the other 50 B&V's.

I agree. I'll update IntToStr and after that's working I can do similar changes to Val.

I agree with you about the SpreadsheetCreator. I always use "Do All" button, and the other ones are not really needed.

I will work on the user friendliness.

"Do all" seems to work fine if just remember to set the path. Maybe "Load all" button should automatically open path configuration dialog if path is unset? And second thing: if path is set and saved and you start SC, maybe it should read info and show "Challenge name" and "Version" automatically. That way it's not needed to go to configuration to check what path was selected.

Regards,
Jouni
