Hi group,
Using WinXP, D7

I have installed more than one language in my system. I want to change the Language/Keyboard programatically. I can do with Shift+Alt key but I want to change it to specific language.

WinXP has some new languages support not present in Win2000, NT4 and ME. Anybody can guide me how can I install new language and Keyborad in those OSes.
For example UR Language is only supported in XP. How can I install it other OSes.

Thanks in advance

S Bokhari
