True, but what you could do is give the user some kind of option, and give them a beginner mode, in which you'll only see the Delphi help by default. This way beginners will not be confused with help showing VB or C# examples.

This assumes of course that you can preset the filters programmatically. I can set them in the SDK viewer.

BTW, where do I get information on how to integrate my own component help into the SDK docs, like Borland, Indy, and Rave do?
