So it was a specific piece of code only? That was not very clear from what you wrote. You said, in reply to something D2005 could not do: load code into the editor. Sounds very general.

If it doesn't load one specific file, it may be that that file is corrupted or cross-linked, and not really a fault of D2005. Load it into Notepad or Wordpad (if you can) and see what's wrong.
