I expect he means \*if\* you need to replace it (at all), in 6-12 months it would be hard (if not impossible) to find replacement parts.

My guess is by that time you'd just buy a new 64-bit machine, because they'd be a lot cheaper by then <g>

In any event, buying a 32-bit system right now is silly only if one doesn't get enough worth out of it; pretty much like anything one buys.
