Actually – research, science, inventions – IOW human progress, has since the dawn of man been slowed down by resistance from authorities.

I do not believe the wheel was greeted with a "wow!" at all. I more think it was regarded "devil's work" or "black magic" and that it only slowly was accepted. Not the least because you afterwards needed one horse to transport what you before needed 5 horses for, meaning a lot to those making a living out of breeding horses.

FTR, my comment was to Nick's post:

> *It's stunning to me that this isn't patently obvious.*

and means that while it is "patently obvious" to him, like the wheel is to all of us, it may not be that to others.
