It's 2006? It has taken that long to get back to what was being done 20 years ago. I agree that it is sometimes necessary to take one step back to go two steps forward, but this is ridiculous.

I don't even know what to say to that.

Believe me it's crap. Been there done that? Oh sorry, it wasn't called dot net (some sarcasm, for fun only).

What was it called?

Yea, market forces! I can buy something at wal-mart that costs 1/3 less but only lasts 1/4 as long before it breaks, market forces, you gotta love 'em.

You aren't getting the point.

Who is "you"?

Whoever.

It's important to know who you are referring to with "you", otherwise the sentence is a meaningless generalization, which it could be regardless.

I can't help but find humor that a developer believes that web based applications and the internet is a fad...in 2006. *shrug*

Internet good, browser OK, browser based apps still around in 2006 bad!

Re: ASP.NET: Fundementally Flawed Architecture

It's not nearly that simple, but ok.
