Does anyone works with BDS2006 using more that one monitor?
Does IDE supports multi-monitors?

Yes, as it was with prior versions as well.
I have D7, D2005 and D2006 working fine (IDE).

I mean is it possible to have main form on one monitor and (for example) debug windows on other?

yes, you can use use different IDE desktop settings for desing time and run time (write code versus Debug an application)

Does BDS2006 store windows monitors info to layout files (*.DST)?

yes, but you have to be aware that Delphi does not like monitors on the left from the main which will have negative screen coordinates.
There are several QC entires for this issue

I'm examining now – what is better – to replace my 17" monitor with 1280*1024 resolution with 21" one with 1650*1050 resolution or to just add one more 17" with 1280*1024.

Add one more 21" and keep 17" as second ;o)

.
