on the other side: it's the package that sells
i mean that we need to be aware what vista is capable of and the more
fancy the package the easier it is to sell, painfull thruth my \$.2

Oh, it has its place.

People who are uncomfortable with computers, want the nicest
presentation they can get, look at unix, it was developed way back by
developers for developers.. hence it was command line where you could
do huge amounts from a single, albeit huge, command which was many
commands mushed together.

Depending on what you're doing sometimes you want it to look nice..
overtime you want it to just get on and do it.
