There are many nice things in Vista, especially for developers. How about being able to add as many websites as you like in IIS7? No more restricting you to one website unless you run the server OS.

Cool but I do not use windows/IIS to run my website

There are also tremendous improvements to the rendering of applications under the new UI framework, meaning the applications aren't constantly having to respond to WM_PAINT; the OS takes care of caching the information needed in GDI and then renders it using DX.

At the expense of consuming more resources. Could've been done better and there is no need for new OS to implement the feature

Much more performant, and you don't get dead windows that render artifacts due to not processing messages.

Hmm. I do not recall seeing those.

The improvements to explorer are great. The breadcrumb trail in the address bar is inarguably a great new feature, and allows for much quicker folder navigation. Being able to group and do advanced sorting and stacking in explorer is great.

I use Total Commander as file manager and wish no better. It is much much faster and convenient in performing my day to day work.

Try to do multi renaming for example n explorer in the same style you can do in commander. It just pathetic

Re: My Vista/Delphi/Dev experience

Being able to instantly search in folders is great. I can't count how many times, in the past, I've gone to C:\Windows\System32 (either in explorer or an Open/Save dialog) and wished there was *some* way just to see the bpl's. Why hello there Vista :). Just type .bpl in the search and, presto, results.

Same thing in commander

And the advanced search features are great. How about if I wanted all of the unprotected music on my PC to put on a device that doesn't supp
