Are you sure you are getting the new Vista style dialogs using C# ?  
Im knocking up a managed C++/CLI application to check this. Havent tried it since late Vista Release candidates.

You should get the new Vista-style open / save dialogs by default if you deploy a pre-Vista application on Vista. It only doesn't work with Delphi apps because of the use of some of the dialog-related flags by Delphi prior to D2007. I've developed Win32 apps using Blackbox Component Pascal (that was last updated in 2005) and they used the new Vista-style open / save dialogs when running on the beta / RC versions of Vista without any mods required at all.

Hi Chris ,  
Im suffering the new 'manifest hell' I had forgotten about with VS2005 SP1 in regards to Managed code C++/CLI so I havent run the quick app I knocked up LOL.

I was referring to Vista Open/Save Dialogs using the new COM interfaces rather than through the old API calls ( GetOpenFileName etc ).

A work arround in case of OpenFileDialog etc in MFC is to not Use OFN\_ENABLEHOOK when calling GetOpenFileName etc. You do then get the

Re: D2007 vs MS Visual Studio 2005

new dialog/s but it isnt too useful for any complex instances plus you get some 'Interesting' asserts when debugging.

I would assume that Pre D2007 that OFN\_ENABLEHOOK was set but not in case of Blackbox Component Pascal ( Wasnt that written by Oberon Systems a spin off company of ETH Zurich ? ) ?

.
