We use AutoUpgrader from AppControls and we are very happy with the technology.

Unfortunately, AVG and F-Secure are as of yesterday flagging the Upgrader3.exe, which is part of the AutoUpgrader mechanism, as a virus

F-Secures says "Virus.win32.autorun.afg"

AVG says "Virus identified Worm/Delf.GFV"

The Upgrader3 is as such a false positive, but might be part of a new virus.

AppControls have now issued an update, but do you know what the virus/worm is about? Is it Delphi related in any way?

Cheers  
Jacob
