Jason Swager wrote:

For those that are interested, I've updated http://delphi.wikia.com/wiki/Setting_up_a_Delphi_Build_Machine to include information on how to setup a Delphi 2007 build machine environment. I've only tested it on Delphi Win32 apps – not Delphi .NET, or C++ Builder apps. It appears to work for building via DCC32 or through MSBuild.

If you encounter any issues with the suggested setup, please let me know. Thanks,
Jason Swager

Nice page Jason. very helpful. And heres an idea for someone who has some extra time on their hands. Write a program, that will use your info, and gather all the info you provided from a SOURCE machine, zip it up or some how package it up into a file or files. Then, use that program to unpack this info onto a TARGET machine. That would be a useful tool. In fact, I might even try it in the next few days if I can find time or would be happy to participate with someone else if they are interested.
