Hi,

do I understand correctly:

- D2008 will support generics for Delphi/Win32
- D2008 will support unicode components only
- For non-unicode applications, D2007 has to be used

The reason seems to be, that inside the IDE only one sort of components can be installed (i.e. unicode components for D2008).

Does this mean, that there will not be generics for non-unicode applications, or will D2008 have the possibility to create non-unicode GUI applications?

Unfortunately I still have to support some Win98 clients, so this might be an issue for me.

kind regards

Ingo
