OLE DB is a set of Component Object Model (COM) interfaces that provide applications with uniform access to data stored in diverse information sources and that also provide the ability to implement additional database services. These interfaces support the amount of DBMS functionality appropriate to the data store, enabling it to share its data. OLEDB is native for MS SQL Server.

OLEDB Direct Components Suite is a set of VCL-style components that allow database access using OLEDB interfaces. It is designed for extremely fast data access and it provides a possibility to use database services that are additionally implemented by OLEDB provider. OLEDB Direct Components Suite should be used if you need to work with very large amount of data.\

OLEDB Direct supports D4-D7 and BCB4-BCB6.
