Hello,

Dragon Soft Team is proud to announce DS Plug-in System 4.5.
RC2 is available for public.

New version includes support for all major versions of Delphi.Win32 (5, 6 and 7).

More information about this release available here:

<http://www.dragonsoftru.com/forums/phpBB2/viewtopic.php?t=90>

Main page: <http://www.dsplugin.dragonsoftru.com/>

New in 4.5

- * Automatic plugin registration: from disk, INI file, registry...
- * Plugin activation sequence: on pluginmanager initialization (automatic) or via code with plugin dependency
- * Application menu support from inside plug-in. Automatic menu merging. Custom menu structures support (DevExpress bars, ...).
- * New demos: Application Form Demo, Standalone HTTP server with plug-in support (will be available in RC3)
- * Full support for Delphi 5 and 6 – you can generate DLL based plug-ins
- * Preliminary work for upcoming Application Framework (create your modular application in a few clicks): different menu type support, plugin management
- * TdsPluginCommand.Active – Allow enable/disable command execution. If Command is disabled it cannot be executed. Also CommandByName will ignore disabled commands
