Dear Friends,

We're happy to announce a new release of Remote Assistant(v.1.2).

It is immediately available for download at:

<http://www.contextsoft.com/products/remassist/downloads.jsp>

This release adds new features to Remote Host application, allowing you to tune its look&feel, provide custom/localized messages, specify your application icon and company logo and provide Port aliases. See readme.txt file included with Remote Assistant software for more details on how to customize look&fell of RemoteHost and how to invoke it from your application.

This version is free for all registered customers.

Returning customers of Context Software as always will receive special price! You need to be logged into "My Account" section in order to see this promotion.

Remote Assistant Software is designed to help you in providing your customers with better help & support over the Internet or LAN. Remote Assistant runs on background in your system tray minimized. When a remote user (customer) requests assistance using free Remote Host software Remote Assistant will notify you by displaying a message box. You will then be able to chat with a remote user, capture remote computer's screen, manipulate with the mouse and keyboard and tranfer files and clipboard content to and from the remote computer.

Fully functional trial version is available at:

<http://www.contextsoft.com/products/remassist/downloads.jsp>

You can order Remote Assistant at:

<http://www.contextsoft.com/products/remassist/ordering.jsp>
