I need a simple memo or rich text component that allows text to be plain, bold, italic, and/or underline. I don't need or want anything else. Preferably, it would load and save its contents as an HTML string, although RTF is acceptable.

I can use TRichEdit, although it does a little more than I need.

<http://www.balticsolutions.com/products/cmemo/>

This doesn't support anything past Delphi 4.
