Hi Yannis,

Thanks for helping out. I've tried it and it worked for my D7, although I had to copy the registry entries as well so that it includes my libraries and components. But it did not work for my D6 complaining that it is not registered.

Yes, I am aware that I could register it again. But because of so many domains and changing usernames visiting different clients as well as using VPNs, I've exhausted my registration times (there is a limit on the number of registrations that you can make) and I already had to call Borland to extend the number of times. I just don't want to go through that again if I can help it, but I will if I have no other recourse.

Thanks Yannis. I appreciate any help you can offer.

Andrew
