Mike are you having a problem with your web service or is it just me? Everytime Yesterday and so far today when I try your site I end up at some site for Apache Tomcat 5.5.9. The address bar of IE has the correct site but the page displayed is for the Apache site.

Don

Dear Friends,

We are happy to announce release candidate 2 of Remote Assistant 2.0.

Remote Assistant 2.0 is a new version of our Remote Assistant software, which we began developing in 2003.

Improvements in this release

~~~~~

- #524 Chat's content is retained during whole session even if chat window is closed.
- #525 Added complete localization of RemoteHost. All messages and captions can be specified in RemoteHost.cfg file.
- #526 Added Message Beep alert when opening Chat session.
- #527 Added support for dual monitor mode. In RemoteAdmin user can select which monitor to control on client side.
- #529 Added forward compatibility features to RemoteHost.\

#### Issues addressed by this release

~~~~~

- #523 Fixed bug in Remote Admin. File Explorer showed incorrect name or remote computer.
- #528 Fixed problems with Tab and some other keys not working properly.

Fully functional trial version is available at:
