Hi all,

ModelMaker Tools is happy to announce the release of
+++++ Code Explorer 5.10 for CodeGear IDEs +++++

New features:

+ = Much improved Find Next / Previous and new Custom Find Identifier
Check movie: <http://modelmakertools.com/movies/mmx-find-identifier.htm>

+ = New Live Metrics[tm]:

- o Check unwired eventhandlers – Unwired event handler methods in a form or datamodule can be an indication of dead code. Unwired event handlers are potential event handlers that are not linked to an event in any component. This could for example happen if the eventhandler was created but the component was deleted or its handler was changed.
- o Check "with statements" – locate potentially dangerous scope problems.

Live Metrics emit warnings *while you edit or browse* your code in the IDE.

Check movie for other Live Metrics:

<http://modelmakertools.com/movies/mmx-live-metrics.htm>

+ = Delphi 2007.Net 2 generics support

+ = Redesigned unit Dependency Analyzer

Check movie: http://modelmakertools.com/movies/unit_dependencies.htm

Details can be found here:

<http://www.modelmakertools.com/code-explorer/history/mmx510.html>

This is a free update for Code Explorer v5 customers.

The fully functional 29-day demo can be found here:

<http://www.modelmakertools.com/code-explorer/download.html>

Highly recommended :-)

Gerrit Beuze
