Those components provided by CG with Delphi are the fastest and more feature rich also!

BDE, dbGo or dbExpress ?

I have been able to insert 50,000 records (6 fields) in 15.76 seconds.

Using which code ?

I add records by executing Insert Query (has Insert statements for 100 records) and not the dataset object where in you add a new record and then update it, etc. etc.

.
