I'm writing a small backup utility. Need to burn a file to a CD/DVD each day so that I end up with one CD containing multiple backups. All clients with have either XP or Vista. I'm using D2007.

I know this topic has been discussed many times. I have used Binary Magics but am getting rid of it for various reasons (poor support, poor documentation etc...). Also don't want to spend several thousand dollars. Needs to be royalty free. What currently are my best options?

I saw a WinSoft just announced Component Suite. Anyone using that?

TIA.
