Try passing the keyname argument without the '\' in front of Software.

```
var
  reg: TRegistry;
begin
  reg:= TRegistry.Create;
  try
    reg.RootKey:= HKEY_CURRENT_USER;
    if reg.SaveKey('Software\Microsoft\Internet Account
Manager\Accounts\00000001',
  'TestRegFile.tst') then
      begin
        ShowMessage('Done');
      end;
  finally
    reg.Free;
  end;
end;
```

> *Ups, Sorry – New code. But it's still not working. I'm getting an empty  
> file in my application dir called 'TestFileReg.tst...Please help...*

```
> if S.SaveKey('\Software\Microsoft\Internet Account
> Manager\Accounts\00000001','TestRegFile.tst') then
