BTW. If I encounter something peculiar with the compiler, is there any way to communicate that directly to intel, rather than through this news group? Mind that I am a mere user and have no rights with respect to installing etc.; that is the job of our system administrators.

Sure. The approach I'd recommend is to apply for an evaluation copy of the compiler at

<http://www3.intel.com/cd/software/products/asm-na/eng/compilers>

Register the serial number and check the box to register for support.

This will give you access to Intel Premier Support and you can file issues directly. You don't even have to install the evaluation compiler – just register. Please understand that once your evaluation period expires, your submissions will have lower priority, but we encourage you to let us know of problems you find.
