Dear Friends,

I am very new to ARM family and right now working with lpc2214 and lpc2148 and EP9302 from cirrus logic.

I can do basic implementation and interfaces with them as I worked with 8051 long time. Now I want to do something with real time OS. I want to load Windows CE on ARM. I have never did this kind of work. So, can anybody tell me from where to start and from where I can get the tutorials and guidance.

Thanks and Regards
Pankaj
