Which ones have you found to be effective? Which design tools have you found to be capable of real commercial projects? Which ones should I steer away from?

EAGLE <<http://www.cadsoftusa.com/>>. Capable of normal commercial usage. The free version is more than adequate for experimentation (though the license forbids commercial use). Upgrading to the full version is reasonably priced.

I haven't found a viable competitor in the same price bracket.

EasyPC is much easier to use and costs about the same:
