.... snip ...

So in this case for comp.arch.embedded and sci.electronics.design (with presumably different attendees) you are saying I should have crossposted? I apologize, I didnt realize double posting was taboo. I viewed it like putting a for sale sign up at the laundromat and another at the pool hall....with twice as much helpful responses. I actually thought that crossposting was more taboo, because then it is more obvious that you are blanketing the area.

You also forgot to snip your quotation.

Cross-posting (limited) is handy, because the better newsreader will mark the cross-posted copies, in other newsgroups, as answered when you read the first copy. Also, only one copy is sent. You should also set follow-ups to cohere the results back to a single news-group.
